

SMART EXPENSE TRACKER – PROJECT SCENARIO

Project Name: AI-Powered Expense Tracker App

Objective:

Build a full-stack expense tracking application where users can manage income and expenses.

Integrate AI to categorize spending and suggest savings insights.

Core Features:

1. User Authentication – Sign up / Login, JWT-based auth
2. Expense Management – Add, edit, delete expenses
3. AI Features – Auto categorization, spending insights
4. UI – Dashboard, charts, filters

GitHub Workflow:

- Repo: expense-ai-app
- Branches: main, dev, feature/*
- Issues for each feature
- PR with code review

API Design:

POST /api/expenses

GET /api/expenses

PUT /api/expenses/:id

DELETE /api/expenses/:id

Database:

Expense: id, title, amount, category, date

User: id, name, email, password

Agent Flow:

Connect GitHub → Fetch issues → AI analyze → Assign → Notify Teams

End of Document
